This plant will grow in dry soil.

Suitable soil is sandy.

The pH preference is a neutral to slightly alkaline (6.8 to 7.7) soil.

**The Header area lets you customize  
your documents with text and graphics.**

Native to the following North American locales: Mexico

### **Culture Notes**

Rosette succulent usually grown for its waxy gray foliage. Prefers a dry sunny environment. Avoid planting in heavy wet soil. Echeverias generally do well with more water and fertilizer and a richer soil than required by other succulents.

### **Pests, Diseases and Damaging Agents**

Pests: Snails, slugs, aphids, mealybugs, root-knot nematodes and weevils.

Diseases: Rust.
